### HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

7.  Examiner's Amendment/Comment
8.  Examiner's Statement of Reasons for Allowance
9.  Other \_\_\_\_\_.

***Reasons for Allowance***

1. The present claims are deemed allowable over the reference U.S. Patent No. 7,132,176 since the above reference is commonly assigned and a terminal disclaimer has been filed to obviate the obviousness-type double patenting rejection.
2. The present claims are deemed allowable over the other references of record since the references of record fail to disclose or render obvious a magnetic recording medium comprising at least a lower perpendicular magnetic layer comprising at least a CoPt-oxide and an upper perpendicular magnetic layer comprising at least Co and Cr, with no oxide, wherein the two layers are formed such that the lower layer is directly adjacent a non-magnetic layer and the crystal grains of the upper layer are epitaxially grown on the crystal grains of the lower layer in a ratio of one to one.

While the prior art of record disclose perpendicular recording media comprising upper and lower magnetic layers meeting the claimed composition limitations, as well as embodiments wherein the lower layer is directly adjacent a non-magnetic layer, the prior art of record fails to teach or render obvious the above structure in addition to controlling the crystal grains in the two unique magnetic layers (one an oxide, the other a non-oxide) such that the crystal grains grow epitaxially in a ratio of one to one. While the Examiner deems that some embodiments of the prior art may be capable of growing in a one to one ratio, the growth of crystals, especially nanoscale crystals as in the magnetic media art, is sufficiently complex that one of ordinary skill in the art would readily appreciate that the claimed ratio would not be "inherent" to dual magnetic layers.

3. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

***Examiner’s Comments***

4. In order to better clarify the record, the Examiner wishes to point out two references which are similar to the claimed invention. Koda et al. (U.S. Patent No. 7,226,674 B2) disclose a perpendicular recording medium comprising a first and second recording layer wherein the crystals of the lower layer are used as “cores” for the crystals of the upper layer (*entire disclosure*). However, Koda et al. fail to teach or render obvious wherein one layer is a non-oxide (*as opposed to oxides of different amounts, which is what the Koda et al. invention discloses*), and also fails to explicitly teach that a “core” is necessarily in a ratio of one to one.

Watanabe et al. (U.S. Patent No. 7,311,983 B2) discloses and claims a perpendicular magnetic recording medium comprising an upper magnetic layer containing CoCr and no-oxide, a lower magnetic layer comprising at least CoPt and either an oxide or nitride, wherein the crystal grains and crystal boundary regions of the first and second magnetic layers are controlled to be substantially identical (e.g. see *Figures 7 and 8*). However, Watanabe et al. fails to qualify as prior art since the effective filing date is June 14, 2004, which is after the April 14, 2003 priority date

associated with provisional application 60/462,298 and April 7, 2004, which is the filing date of the 371 Application PCT/JP04/04994.
